# Parse Quality Report

Generated: 2026-07-18

## Evaluation Scope

This repository currently contains one actual resume PDF (`res2.pdf`) and four deliberately varied regression fixtures (`.txt`,
`.xml`, unsupported, and empty input). The fixture results verify failure handling; they are not presented as resumes from the
organizer's Google Drive dataset.

The full organizer Drive folder is not present in this workspace, so this report does not claim coverage of those files. Before
judging the full dataset, run:

```
```bash
.venv/bin/python -m resume_pipeline.cli /path/to/downloaded/drive/folder
```
```

That command regenerates this report from every raw input and retains Failed parses instead of dropping them.

## Actual PDF Result

| File     | Input Type      | Method                    | Quality Flag | Words Recovered | Anomalies |
|----------|-----------------|---------------------------|--------------|-----------------|-----------|
| res2.pdf | Real resume PDF | Docling layout extraction | Partial      | 229             | 0         |

### What Was Successfully Recovered

- Identity: Ananya Subramanian, email, and phone
- Education: Anna University, B.E. Information Technology, graduation year 2022
- Skills: 14
- Projects: 2
- Experience entries: 2
- Certifications: 2
- Evidence provenance: 28 of 28 extracted evidence quotes located in the source PDF
- CGPA: correctly left `null` because no CGPA or percentage was found

### Why It Is Marked Partial

The extracted document ends with the meaningful year range `2018 - 2022`. The conservative truncation heuristic treats a short final
line without punctuation as a possible cut-off and therefore assigns `Partial`. No field anomaly or extraction failure was detected.
In practical terms, this PDF parsed successfully; the lower flag avoids overstating certainty when the heuristic cannot prove the
final line is complete.

## Regression Fixtures

These inputs exist to demonstrate that malformed and unsupported files remain visible.

| File                | Fixture Purpose               | Method      | Quality | Anomalies | Result                                       |
|---------------------|-------------------------------|-------------|---------|-----------|----------------------------------------------|
| sample1.txt         | Short plain-text resume       | text        | Partial | 0         | Structured fields extracted; short-text flag |
| sample2.xml         | Malformed-value sanity checks | xml         | Partial | 2         | Bad email and out-of-range year surfaced     |
| sample3.unsupported | Unsupported extension         | unsupported | Failed  | 1         | Explicit Failed Parse; no score              |
| sample4_empty.txt   | Empty input                   | text        | Failed  | 1         | Explicit Failed Parse; no score              |

## Quality Definitions

- Clean: sufficient coherent text, no corruption/truncation signals.
- Partial: usable extraction with a short-text, truncation, or recoverable-quality concern.
- Failed: no usable text, unsupported input, or severe extraction corruption. The candidate remains in output and requires human review.

## OCR Status

The current actual PDF contains extractable text, so OCR fallback was not triggered. For a PDF yielding fewer than 50 words, the
pipeline automatically retries with full-page OCR and reports the method as `docling+ocr`. No scanned organizer resume was available
locally to claim an OCR result here.

The screenshot displays the Sift Job Descriptions interface. At the top, the Sift logo is on the left, and 'Job Descriptions' and 'Resumes' tabs are on the right. Below the header, a 'Roles' tab is active. The main heading is 'Job descriptions', followed by the instruction: 'Define what matters for each role, then score every extracted resume against the same criteria.' On the right, there are buttons for 'Paste JD' and '+ New JD'.

A modal window titled 'Parse a job posting' is open in the center. It has a search bar at the top with the placeholder 'Search roles or skills'. Below the search bar, the modal is divided into two main sections: 'Job description' and 'Parse draft'. The 'Job description' section contains a text area with the placeholder 'Paste the unstructured job posting here...'. Below this, the role 'Backend Developer' is shown with skills: 'Node.js/Python/Java', 'REST API design', 'SQL or NoSQL DB', and 'Git/GitHub'. The 'Parse draft' section shows a list of roles: 'API Integration Developer', 'Database Developer', 'Frontend Developer', and 'Full Stack Developer'. Each role card displays its skills and a 'CGPA' score. For example, 'API Integration Developer' has skills 'REST API consumption', 'Postman or Swagger', 'JSON handling', and 'Any backend language', with a 'CGPA 6+' score. The 'Full Stack Developer' role has skills 'React.js', 'Node.js or equivalent', 'Database', and 'REST API design', with a 'CGPA 7+' score. A 'Parse draft' button is visible at the bottom right of the modal.
